

Flexible applications

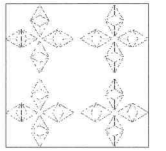

Reflexite® 2032 / 2018 Highbright

High performance vinyl films for flexible applications

These materials are ideal for the manufacture of construction zone equipment. Examples include cone collars, flexible roll up signs and tubular posts.

Product benefits include:

- Prismatic high brightness materials
- Vinyl Construction
- Outstanding visibility day and night
- Fluorescent colour available for added visibility during the day and in adverse weather conditions
- Excellent screen printing properties
- Materials are intended to be welded onto a backing material

Product Identification pattern for Reflexite® 2032/2018

Product	Colour range	Meets reflectivity of	Roll sizes
Reflexite® 2032	White, orange, Fluorescent yellow	EN12899-1 Class 2, EN 13422 RB2	775mm x 100m
Reflexite® 2018 Highbright	White, orange, Fluorescent yellow	EN12899-1	775mm x 100m

Please Note: These materials are strictly intended to be welded onto a backing material.

Flexible applications

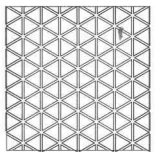

Reflexite® Channelizer

Prismatic, metalised and self adhesive

All-round self adhesive prismatic film for application such as street furniture, bollards, tubular posts and delineation devices.

Product benefits include:

- Prismatic construction for long distance visibility
- Easy to cut and apply even around devices
- No edge sealing
- No risk of water or dirt ingress
- Heat and cold resistance
- Impact resistant

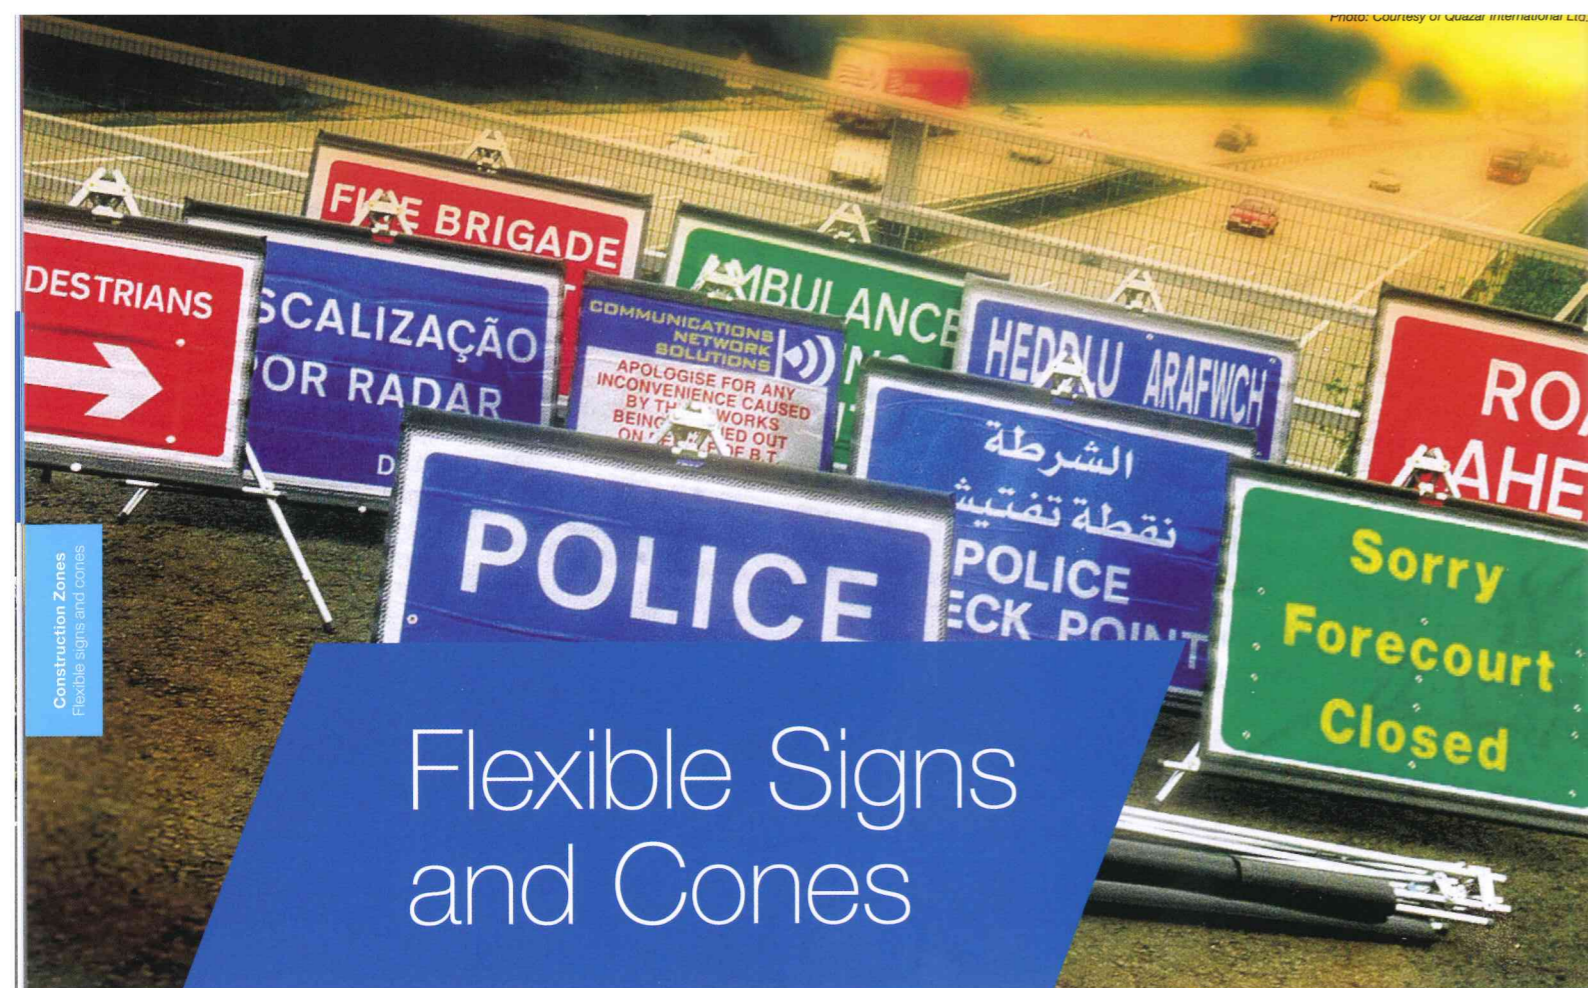

Product Identification pattern for Reflexite® Channelizer

Product	Colour range	Conforms to	Roll sizes
Reflexite® Channelizer	White, yellow, fluorescent orange	EN 12899-1 class 2 (colour and photometrics)	762mm x 45,7m

Please Note: Supplied with self adhesive backing.

Figure 1-3. Reflexite originally invented the prismatic reflective materials and as a part of the ORAFOL product offering, this technology continues to provide safe and visible solutions for all work zone environments.

Flexible Signs and Cones

Flexible signs, traffic cones and tubular posts have some of the toughest jobs on the road. Impact from motorists and the constant set-up, take-down and being tossed in the vehicle for the next job site make for rough conditions. All the while, they *must* maintain visibility in order to protect the life of that roadway worker doing his job just metres away.

That's why ORAFOL offers its Reflexite® line of high performance prismatic materials for applications including cone collars, tubular posts and flexible roll up signs. Materials are available to comply with EN 12899-1 and EN 13422, and feature the superior durability, flexibility, abrasion resistance and lasting performance for which the Reflexite® brand is known around the globe.
